## 1. Qualitative Information Regarding Business Results, etc. for the First Nine Months of the Current Fiscal Year

### (1) Business Results

#### General Overview of Business Performance

During the first nine months (April – December 2022) of the fiscal year ending March 31, 2023, there were increasing signs of a deceleration in the global economy on the back of China’s strict zero-COVID-19 policy, Russia’s invasion of Ukraine, and the tightening of monetary policies to rein in persistent inflation, particularly in the United States and Europe.

In the electronics industry, the automotive electronics market performed well overall during the period, on the back of the increasing electrification of vehicles and more extensive use of electronic components in vehicles to help realize a decarbonized society, although uncertainties surrounding the ongoing shortage of some semiconductor components continued to muddy the outlook. The industrial equipment market also performed well, primarily supported by increasing capital investments for production capacity expansion, factory automation and digitization around the world. However, the markets for consumer products, telecommunications equipment, and computers and storage saw a continuing decline in demand due to the deteriorating market conditions.

Working within this business environment, we have proceeded with the development of new products and technologies for power, analog and standard devices, where the ROHM Group excels, for the automotive electronics and industrial equipment markets, where mid- to long-term growth is expected. Through such efforts, we have promoted our proposals for total solutions that can extensively contribute to meeting customers’ energy-saving and miniaturization needs.

In terms of production, we have continued to take action to achieve total optimization, and we have also promoted the installation of labor-saving and automated production lines through “monozukuri (manufacturing) innovation.” We have also made every effort to put in place a system to ensure the stable supply of our products to customers by improving productivity and increasing our production capacity to cope with growing demand.

Under these circumstances, consolidated net sales for the first nine months of the fiscal year ending March 31, 2023 were 390,158 million yen, up 15.4% from the same period last year mainly in the automotive electronics and industrial equipment markets, and operating profit increased 34.2% from the same period last year to 75,414 million yen. The operating margin for the first nine months of the current fiscal year increased to 19.3% from 16.6% in the same period of last year.

Ordinary profit also increased 46.5% from the same period last year to 90,528 million yen due to an increase in operating profit and foreign exchange gains.

Profit attributable to owners of parent increased 40.3% from the same period last year to 67,947 million yen.

Moreover, EBITDA (\*1), an accounting metric that we emphasize in the ROHM Group, was 115,299 million yen for the first nine months of the fiscal year ending March 31, 2023, up 34.7% from the same period last year.

\*1 EBITDA (Earnings before interest, taxes, depreciation and amortization)

An accounting metric widely used around the world to compare businesses in terms of earning power, calculated by adding interest and depreciation to a company’s pretax earnings. The ROHM Group simplifies the EBITDA calculation by adding back depreciation to operating profit.

#### Overview of Performance by Segment

##### **Integrated Circuits (ICs)**

By market, in the automotive electronics market, sales of power management ICs for advanced driver assistance systems (ADAS) and infotainment performed well during the period, and sales of high-value-added ICs, such as isolated gate driver ICs for powertrain applications, rose steadily as the popularization of electric vehicles (EVs)

accelerated. In the industrial equipment market, sales of power management ICs saw steady growth on the back of strong capital investments in related industries, while in the computer and storage market, sales of power management ICs increased, primarily through an increase in the market share of power management ICs for solid-state drive (SSD) applications.

As a result of this and the ongoing weakening of the Japanese yen, consolidated net sales for the first nine months of the fiscal year ending March 31, 2023 were 178,578 million yen, up 16.6% from the same period last year, and segment profit was 40,132 million yen, up 60.3% from the same period last year.

### **Discrete Semiconductor Devices**

By business segment, sales of transistors, diodes and power devices generally performed well as sales for the automotive electronics market, particularly for xEVs (the generic name for electromotive vehicles such as hybrid electric vehicles, plug-in hybrid electric vehicles and fuel-cell electric vehicles), remained strong during the period, while sales for the industrial equipment market, specifically for solar power generation, also saw solid growth. Sales of light-emitting diodes (LEDs) for the consumer product market, primarily for amusement products, increased, but sales of laser diodes declined, primarily in the industrial equipment market.

As a result of this and the ongoing weakening of the Japanese yen, consolidated net sales for the first nine months of the fiscal year ending March 31, 2023 were 163,392 million yen, up 16.5% from the same period last year, and segment profit was 28,196 million yen, up 14.3% from the same period last year.

### **Modules**

By business segment, sales of printheads increased primarily for printers. As for optical modules, sales of sensor modules primarily for telecommunications equipment grew.

As a result of this and the ongoing weakening of the Japanese yen, consolidated net sales for the first nine months of the fiscal year ending March 31, 2023 were 26,565 million yen, up 10.1% from the same period last year, and segment profit was 4,016 million yen, up 17.7% from the same period last year.

### **Others**

By business segment, sales of high-reliability resistors, such as high-power resistors and shunt resistors, for the automotive electronics market remained strong throughout the period.

As a result of this and the ongoing weakening of the Japanese yen, consolidated net sales for the first nine months of the fiscal year ending March 31, 2023 were 21,621 million yen, up 4.7% from the same period last year, and segment profit was 4,159 million yen, up 6.8% from the same period last year.

Sales referenced in the “Overview of Performance by Segment” section above were to customers outside of the ROHM Group.

## **(2) Financial Conditions**

At the end of the third quarter of the fiscal year ending March 31, 2023 total assets were 1,082,717 million yen, an increase of 53,585 million yen from the end of the previous fiscal year, which can be largely explained by increases respectively in property, plant and equipment of 39,959 million yen, inventories of 27,375 million yen, notes and accounts receivable-trade of 8,349 million yen, cash and deposits of 7,829 million yen, partially offset by decreases in securities of 24,004 million yen and investment securities of 15,131 million yen.

Total liabilities were 188,079 million yen, a decrease of 699 million yen from the end of the previous fiscal year, which can be largely explained by decreases in accounts payable-other of 4,195 million yen, deferred tax liabilities of 4,067 million yen, electronically recorded obligations- operating of 890 million yen, partially offset by increases in income taxes payable of 7,099 million yen, other in current liabilities of 1,958 million yen (Of electronically recorded equipment-related obligations: 3,176 million yen).

Total net assets were 894,637 million yen, an increase of 54,284 million yen from the end of the previous fiscal year, which can be largely explained by increases of 47,379 million yen in total shareholders' equity due to reporting of profit attributable to owners of parent, foreign currency translation adjustment of 15,781 million yen, partially offset by a decrease in valuation difference on available-for-sale securities of 9,225 million yen.

As a result, the equity ratio increased to 82.6% from 81.6% at the end of the previous fiscal year.

## **(2) Qualitative Information Regarding Consolidated Financial Results Forecast**

The global economic outlook is likely to remain uncertain, primarily on the back of Russia's ongoing invasion of Ukraine, rising interest rates globally and unstable foreign exchange markets. The electronics market will likely continue to remain strong thanks to the further promotion of energy-saving to combat climate change and help realize a decarbonized society, ongoing lifestyle changes, and increasing capital investments for factory automation and digitization around the world, but it may be adversely affected by a decline in demand for the consumer product market as well as for the computer and storage market.

As of this date, we are on track to achieve the Company's full-year consolidated earnings forecast for the fiscal year ending March 31, 2023, as revised in November 2022. That said, various downside risks will likely continue to cloud the outlook for the electronics market during the fourth quarter (January – March 2023), including the risk of higher materials and other costs due to the effects of elevated energy and materials prices, geopolitical risks in the procurement of materials that are essential for production, the threat of a COVID-19 pandemic resurgence, and risks in the recruitment of competent human resources. Should we determine it necessary to further revise the Company's earnings forecast for the fiscal year ending March 31, 2023, we will disclose the revised forecast in a timely manner.

2. Consolidated Quarterly Financial Statements and Important Notes  
 (1) Consolidated Quarterly Balance Sheet

(Millions of yen)

	As of March 31, 2022	As of December 31, 2022
